# Key Points

08/31 – 09/06

## Thursday

- Scattered showers and thunderstorms in southern CA mountains and deserts, as well as the Sierra may produce strong winds and lightning. New fire starts possible.
- Poor air quality in far northern CA due to nearby wildfires.

## Thursday-Monday

- Prolonged heat risk for much of the state will likely cause impacts to not only sensitive groups, but those in the general population without access to adequate cooling and hydration.

## Monday-Tuesday

- Temperatures still above average, afternoon thunderstorms possible (especially the mountains), and elevated to critical fire weather conditions.

# WEATHER OF CONCERN

## Weather of Concern

- Scattered showers and thunderstorms in Southern California mountains and deserts, as well as the Sierra, may produce strong winds and lightning Thursday.

## **Active Weather Warnings, Watches and Advisories by County:**

- <https://alerts-v2.weather.gov/counties/CA>

# WEATHER SYNOPSIS BY REGION

## **NORTHERN CALIFORNIA**

A low pressure trough over Northern California today will move east of the area by midday Thursday. An area of thunderstorms over the Central Sierra will brush by the south end of Lake Tahoe this morning. Otherwise, no thunderstorms are in the forecast through Saturday. Afternoon South-West winds will gust to 25-30 mph in eastern areas for a few hours this afternoon. Temperatures will be about 5-10 degrees above normal and relative humidity (RH) will drop to 10-20% in most inland areas today. The marine layer is about 1500-2000 ft. deep and fog moved into coastal basins last night.

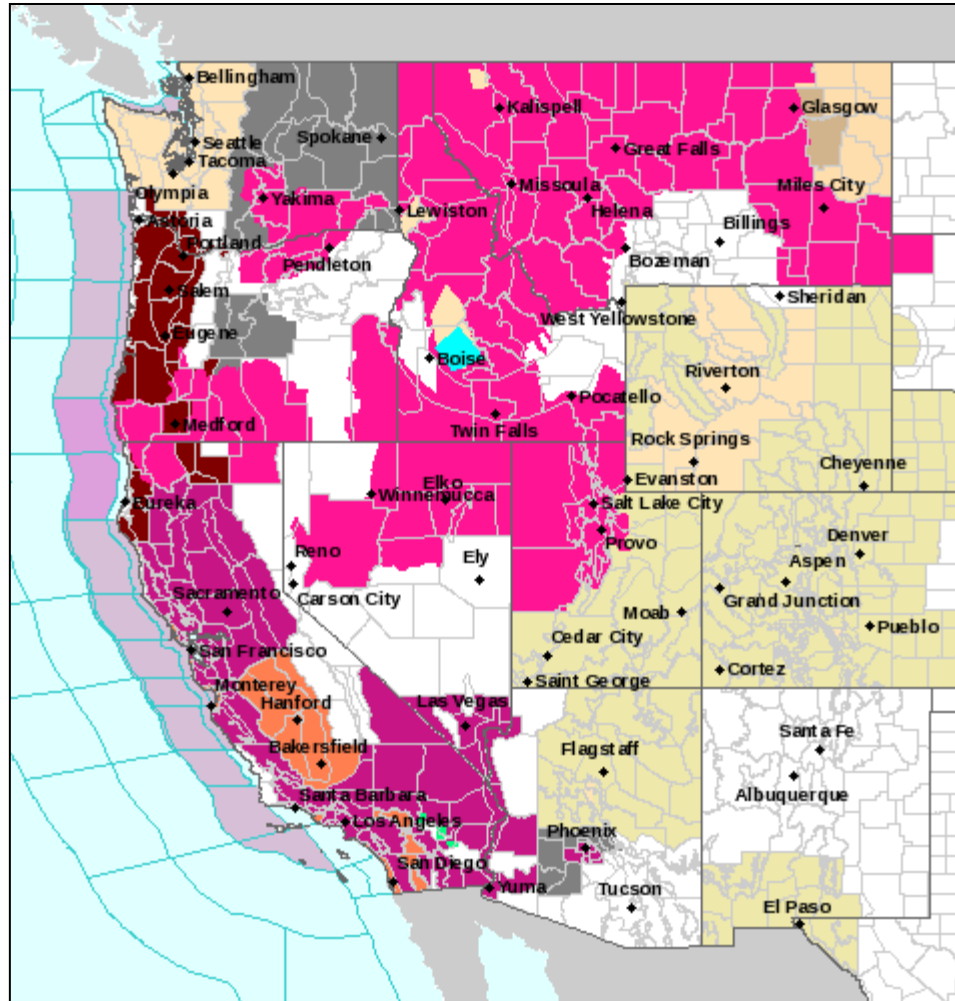

Strong high pressure will follow and produce very hot and dry weather with poor overnight RH recovery Thursday through the weekend. North-Northeast/Offshore winds will gust to 20-25 mph in wind-prone areas in the north from the northern Cascade-Sierra foothills to the coast during nights and mornings tonight through early Friday, enhancing the hot and dry conditions. The stable conditions under the strong high will also lead to poor smoke dispersion and poor air quality in canyons and valleys near active fires. The marine layer will be shallow and only areas along the immediate coast will get relief from the very hot temperatures. There is a chance that subtropical moisture will move through Southern California and up toward Northern California late in the weekend or early next week and produce isolated thunderstorms.

## **SOUTHERN CALIFORNIA**

Mid-level moisture continues to circulate through the state early this morning. This has led to overnight convection in the central part of the state, and as of 6 am, isolated showers and storms were occurring over Kern and Tulare Counties as well as central Merced and Tuolumne Counties. These storms are mainly producing virga, but one or two strikes may occur prior to the storms dissipating around 9 am. The rest of the day will be hot, dry and unstable. Temperatures today will again range from the upper 80s along the coast to 105-110 in the valleys and lower foothills. Minimum RH will continue to be in the 10-15% range over most areas away from the immediate coast. Isolated storms will develop once again during the afternoon with the highest likelihood of storms occurring in the Sierras and the desert sides of the Angeles, San Bernardino and Cleveland National Forests. The storms will produce gusty winds, but little rainfall, as the move northeast at 10 mph. After the high pressure area over the Great Basin weakens, another high pressure area is expected to develop over Central and Northern California Friday into the weekend. This will serve to focus the hottest temperatures over the northern two-thirds of the state throughout the holiday weekend. The San Joaquin Valley and Sierra Foothills may experience record heat with temperatures getting close to 112 in the hottest locations by Saturday. In general, fewer storms are expected Friday into the weekend with just a handful of storms possible over the desert and adjacent areas of the Southern California mountains. Little, if any, convection is expected in the Sierras for Friday and beyond. Temperatures over Southern California may edge downward a bit this weekend, but overall, temperatures will remain 10-15 degrees above normal through at least the middle of next week. More significant cooling may occur the weekend of September 9th.
